

Job Vacancy: Posted February 2008

GeoQuest Data Manager

Start Date: March/April 2008

Location: Houston Texas USA

GTS Geotech are currently seeking to recruit a number of GeoQuest Data Managers. We have a number of positions available where you will work as part of a data management team involved in a major data cleanup project.

Role and Responsibilities:

You will be a member of a team of data managers and have previous experience of data cleanup work. Your responsibilities will include one or more of the following:

- 2D & 3D seismic data management in GeoFrame/IESX
- well data management in GeoFrame/IESX
- Ensure data is loaded using correct cartographic projection
- Manage projects already loaded and associated disk resources
- Useage of ProSource and/or DataLogix to compare and clean-up datasets
- Project creation and management
- Import/Export of interpretation data

Background/Experience:

- Desired: 3+ years of E&P industry experience
- Experience with GeoQuest applications including GeoFrame, IESX
- Experience in data cleanup work (well, seismic, location, interpretation data etc) ideally using tools such as ProSource and DataLogix
- Proficient with Unix/Linux OS

Technical Competencies:

- Understanding of Exploration and Production technologies and dataflows
- Ability to match technical solutions to customer's business needs
- Excellent analytical and problem solving skills
- Thorough knowledge of data management practices and procedures in the GeoQuest environment
- Proficient with Unix/Linux OS

You will need to be already authorized to work in the USA or be an existing GTS Geotech employee.

Please include your current salary details when responding. Email your CV and cover letter to tim.shepherd@gts-geotech.com

GTS Geotech offers a competitive salary depending on experience, benefits package, including non-contributory pension scheme and private health and travel insurance, relocation assistance may be available if required.
