

Data Services

GTS Geotech offers a comprehensive suite of data management services, delivered by experienced staff. We understand the importance of data integrity and the value of your organization's data assets. We offer the help your organization needs to effectively manage its data throughout the data life-cycle. This includes all services from high-level consulting to a routine data clean-up.

On-site Data Support Services

- Loading, clean-up, merging, consolidation, maintenance, transfer, transformation, transcription and exporting of data held in project databases and corporate data stores
- Development of standards, processes and procedures to properly manage data from receipt of new data to project archive
- Tools used include customized SQL queries and scripts— together with those provided by software vendors
- Data types include seismic, navigation, wells, geological and geophysical interpretation, mapping, engineering and production
- Databases and formats covered include OpenWorks™, GeoFrame™, Finder™, Recall™, proprietary corporate databases, ZMAP Plus™, SEG-Y, LIS, LAS, DLIS, SeisWorks™, IESX™, Charisma™ and Kingdom™
- Oracle database administration and optimization

- 
- Access to a team of professionals with extensive, practical, hands-on experience in all aspects of E&P data management
 - Enhanced user productivity through data
 - Accessibility
 - Availability
 - Integrity

Data Room Services

- Data room set-up, including hardware and software configuration and data loading
- Data room support, including applications and systems support (remote and/or on-site as required), plotting, mapping and post-visit clean-up

GTS Geotech is the largest independent supplier of applications and systems support to the oil and gas industry.
